Upload Assignment: Assignment: Snakety Snake Snake

ASSIGNMENT INFORMATION

Points Possible

5

Welcome to your first assignment! For this assignment, I want you to write a program that converts the string **snakety snake snake** into **SnAkEtY_SnAkE_SnAkE**. Each word in the new string starts with an upper case letter, and alternates upper and lower case. Each space is replaced by an underscore. When I run the program, it should print the second string. Please just submit a single file Python 3 program structured using the "if __name__ == 'main':" structure I described.

Evaluation criteria: I'll grade the submission as follows:

100%: The program works, and you used correct style in the program.

80%: The program works!

50%: The program does not work, but I can see you put some effort in.

0%: You didn't turn anything in, or you submitted something that doesn't convert the string (e.g. you just print the second string).

Good luck!
